Passive 66 MHz-PCI-CAN-Interface

CAN-PCI/266

## Powerful CAN Interface for PCs

The module CAN-PCI/266 is a low cost PC board designed for 66 MHz PCI bus systems that uses a PCI bus width of 32 bits or in 33 MHz PCI bus systems at a bus speed of 33 MHz.

## CAN Interface

The fully ISO 11898 compliant CAN interfaces allow a data transfer rate of 1 Mbit/s, is opto-isolated, and, among many other features, has the ability to set the bit rate through the software.

## Software Support

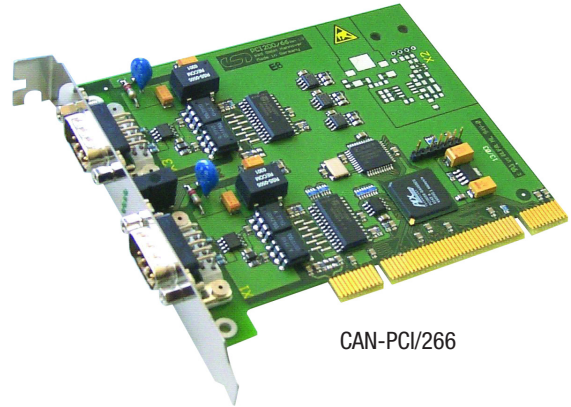

Software drivers are available for Windows, Linux, QNX and other operating systems upon request. Please note: The performance of the host CPU may limit the maximum effective CAN bit rate value because this is a passive CAN module without a microcontroller on-board.
